Adobe Acrobat Reader Printing Tips:

1) Select "FILE" then "PRINT" and select your printer.

- 2) In the print options box do the following:
 - A) Locate check box "Shrink to Fit". Place check in box.
 - B) Locate box "Print Quality". Select highest print dpi allowed by printer.
 - C) If print quality listed is not as high as that printers normal quality, press the "SETUP.." button. In the next screen, press the "PROPERTIES" button and set the printers print quality to the highest print dpi allowed.

New Radio

Step	What Section To Go To
Remove old radio from dash	Remove & Install
Wire the new radio	Wire New Radio
Mount the new radio	Mount New Radio
Finishing the installation	Remove & Install

Parts Needed For This Radio Install

Parts REQUIRED for the install	Description	
Snap on in dash wire harness	Toyota 87 and newer harness	
Kit Pocket below radio for Toyota radios which had an optional CD		
player mounted below the original Toyota radio (read instructions first)		

Optional parts for this install

None

Tools Needed To Complete This Install

Hand tools needed to remove radio

Accessory tools needed to test and wire the new radio

PLUS: Wire ties or electrical tape: to neatly bundle and organize your wires for a professional appearance.

TOOL TIPS:

and (-) negative baterry leads to a pair of speaker will cause the speaker to make a "Pop" sound indicating that pair of wires goes to that speaker. Voltage Meter: Always check +12 Volt power wires for voltage before making wire connections. These wires will fluctuate between 10 and 14 Volts. Solder Iron or Crimp Tool: make wire to wire connections using either a solder iron and electrical tape, OR plastic crimp terminals found at most hardware or auto parts stores.

Small Battery: use a battery to test speaker wires. Touching the (+) positive

Installation Difficulty Ratings

Easy. No advanced skills or specialty tools needed. Basics. Simple tools required. Installs quickly.

Intermediate. Requires knowledge of tools, or disassembly of panels.

Advanced. Requires advanced tools, or extra time.

Difficult. Involves modifying or cutting of the installation area. Advanced

tools and/or skills required. Best if performed by experienced installers.

Remove Factory Radio

STEP 1:

To remove the radio the plastic dash panel surrounding the radio must be removed. Locate and remove two (2) phillips screws at the top of the dash panel above the air conditioner controls.

Pull out the ashtray. Insert one hand into the opening where the ashtray was located and pull the plastic dash panel until the lower part of the plastic dash panel begins to pull away from the main dash assembly. Continue to unsnap the plastic dash panel until it frees from the dash.

You do not need to unplug the plastic connector attached to the cigarette lighter at the bottom rear of the plastic dash panel. There should be enough slack in the wiring to allow the plastic dash panel to be set off to the drivers side of the center console.

STEP 2:

The radio is secured to the dash with metal brackets on the side of the radio. Locate and remove four (4) 8mm bolts / phillips screws that secure the brackets to the dash.

Pull the radio out of the dash. Unplug the antenna cable from the rear of the radio. Unplug 2 plastic connectors that are plugged into the rear of the radio. The radio can now be completely removed from the dash.

Wiring The New Radio

Move to: Wire New Radio Section

Mounting The Radio

Move to: Mounting New Radio Section

The Install Doctor STRONGLY recommends purchasing a 'DIN' radio for this vehicle. 'DIN' radios are a direct replacement for the factory installed radio in this vehicle. More information is available in the "**Mount New Radio**" section.

Completing The Radio Installation

Toyota radio with optional Toyota CD player below radio

Standard Toyota radio with pocket/tray below radio

STEP 1:

The radio is secured to the brackets of the radio/pocket assembly with four (4) phillips screws / 8mm bolts, 2 on each side of the radio.

Remove all 4 screws and pull the radio out of the brackets.

NOTE: notice that the face of the radio is flush or level with the pocket below it. This is important to remember when mounting the new radio in latter steps.

Installation TIP: If your vehicle had the optional Toyota CD player mounted below the Toyota radio instead of a pocket/tray The Install Doctor STRONGLY recommends removing the CD player and mounting either a Toyota pocket or optional kit pocket below the radio. Toyota pockets can be purchased at a local Toyota dealership and the optional kit pocket can be purchased from a local car stereo installation shop.

STEP 2:

The new replacement radio can be inserted into the brackets in the same location that the auto makers factory radio was mounted.

This information is shown in more detail in the "**Mount New Radio**" section at the end of this document.

All Information, Including Photos And Illustrations, In These Pages Is Believed To Be Correct And Reliable. The Information Contained In These Pages Is Given As General Information For The Installation Of Audio, Video, Security, Communications, And Other Accessory Products Into Mobile And/Or Vehicle Applications. The Install Doctor, Any Subsidiaries Or Divisions Thereof, Or Any Member Of These Companies Shall Not Be Held Liable For Any Damages And/Or Injuries Resulting From The Use Of Information Contained In These Pages. All Information Contained In These Pages Should Be Checked And Verified With Appropriate Test Equipment To Assure The Safety And Proper Operation Of Equipment Installed And The Vehicle Itself. Careful Attention Should Be Given To All Electronic/Electric Circuits. High Voltages And Currents Can Cause Bodily Injury, Skin Damage, And Even Death. Installs Are Taken At The Risk Of Each Installer, And/Or Individual.

STEP 3:

Insert the radio/pocket assembly back into the dash. Plug the black antenna cable into the rear of the new radio. Make sure all wire connections for the new radio have been completed and all connectors to the new radio have been plugged in. Secure the metal brackets on the sides of the radio/pocket assembly with the same screws that had secured the original radio.

STEP 4:

Reattach the plastic dash panel surrounding the radio. Secure the top of the plastic dash panel with the 2 screws removed earlier.

The Installation Is Now Complete

Document Title	Document #
Testing wires when installing a new radio	999013
Why use an OEM snap on wire harness	999008
Wiring your new radio using a wire harness	999009
Wire splicing: soldering vs. crimping	999004

Wiring Instructions:

The power and speaker wires needed to connect the new radio are attached to the connector of the wire harness located inside the vehicles dash. The Install Doctor **STRONGLY** recommends using an optional snap on wire harness that is specifically designed to snap into the vehicles dash wire harness connector. This will keep you from cutting the vehicles wires. This optional snap on wire harness will have wires on the opposite side of the connector that will allow you to splice these wires to the new radios wires. The only other option is to cut off the vehicles dash wire harness connector and splice the new radios wires directly to these wires. The optional snap on wire harness takes all the guess work out of trying to figure out what each wire is in the vehicles dash wire harness. The optional snap on wire harness shows you what each wire is.

Radio Wire & Color Code Information

Page 2 of 2

Factory in-dash wire harness (this vehicle has a 2 pc harness) that snaps into the factory radio

Pin	What It Is	Typical Toyota In Dash Wire Color	Typical New Radio Equivalent Wire Color
A	Right Front Speaker (+)	Green	Gray
В	Left Front Speaker (+)	Pink	White
С	+12 Volt Ignition Wire	Gray	Red
D	+12 Volt Battery Wire	Blue w/ Yellow Stripe	Yellow
Е	Right Front Speaker (-)	Blue	Gray w/ Black Stripe
F	Left Front Speaker (-)	Purple	White w/ Black Stripe
G	Ground Wire	Black	Black
Н	Power Antenna Wire 1		Blue (join wires 1 & 2
I	Power Antenna Wire 2		together to this blue wire)
J		Do Not Use	
K	Right Rear Speaker (+)	Red	Purple
L	Left Rear Speaker (+)	Black	Green
М	Right Rear Speaker (-)	White	Purple w/ Black Stripe
Ν		Do Not Use	
0		Do Not Use	
Ρ	Left Rear Speaker (-)	Yellow	Green w/ Black Stripe

Note: using an optional snap on wire harness adapter will simplify the wiring. Most snap on wire harness adapters have already converted and color coded the wires from the auto makers in dash wire harness to match typical aftermarket radio wire colors.

** The wire colors listed in the chart above are typical for this vehicle manufacturer during these years but may not be the exact colors for this vehicle. This is another reason to use a snap on wire harness adapter. **

Installs Are Taken At The Risk Of Each Installer, And/Or Individual.

NOTE:

Before you begin: The best method to mount a new radio in this vehicle is to unscrew the auto makers factory radio from the brackets attached to the radio and screw the new radio into the brackets just as the factory radio was. This keeps the vehicle looking as stock from the factory as possible and means that you do not have to purchase an installation kit to mount the radio.

This method is called "ISO" mounting a radio. "ISO" mounting a radio has become a very common installation method for new replacement radio. In order to "ISO" mount your radio, three things must exist:

- The radio must be a 'DIN' style rectangular radio 1)
- The 'DIN' radio must have mounting holes pre-drilled into the side of the radio to allow 2) the radio to be 'ISO' mounted
- 3) The radio must have a removable trim ring surrounding the face of the radio

1

Remove the auto makers factory radio/pocket assembly from the vehicle. Remove the screws/bolts securing the radio to the brackets which are also attached to the sides of the pocket below the radio.

Removal Tip: some auto makers use phillips screws, some use 8 mm bolts with phillips screw cutouts in the top of the bolts. For best results use a socket to prevent stripping out the screws. If your radio has hard to remove phillips screws, insert the phillips screwdriver into the phillips screws and firmly tap with a hammer to "break" the tension bond between the phillips screws and the metal chassis of the auto makers factory radio. Then attempt to unscrew the phillips screws.

Auto makers original radio with attached pocket below the radio

Remove the auto makers factory radio, but leave the brackets attached to the pocket.

What if you do not have a pocket? If the radio in your vehicle was a Double 'DIN' radio (or it did NOT have the pocket below the factory radio) The Install Doctor STRONGLY recommends that you convert your radio assembly over to use a pocket below the radio. You can purchase the pocket from a Nissan dealership or you can purchase a "multi" pocket radio installation kit that is designed to fit bracket-pocket applications such as this application. Once you have the pocket, secure the pocket to the metal brackets and you can avoid using radio installation kits to mount the new radio to the dash.

On the side of the new 'DIN' radio should be pre-drilled holes to allow you to 'ISO' mount the new radio into the brackets. Most car radio manufacturers design their radios with many holes on the side of the radio so the radio can be mounted to many different kinds of bracket/ pocket configurations.

If you are going to mount your radio in this manner, you will probably have to remove the radios face trim ring around the face of the radio. This trim ring will most likely prevent the vehicles dash panel from securing properly back onto the dash.

New radios removeable trim ring surround the face of the radio

Face of radio Body of radio θ Ð 0 0 Line up

like this

A common mistake when mounting your new radio to the auto makers radio bracket and pocket is selecting the wrong holes on the side of the new radio.

The new radio body, NOT THE FACE PLATE, should line up with the pocket below the radio. Most new radio manufacturers design their radios with a face that protrudes out from the body of the radio (or even faces that detach from the body). The most common mistake is to mount the new radio with the protruded face lined up level with the pocket below the radio, not the new radios body.

(if the radio does have a detachable face, and the front of the detachable face is lined up with the pocket there will be a large gap when the face is detached from the body. If the body is lined up with the pocket and the face is detached, the body will still be lined up with the pocket and there will be no gap.)
